

# Analiza și Modelarea Sistemelor Software - Intro

Traian Șerbănuță

2025

# Welcome

- ▶ Course: Software Systems Modelling / Analiza și Modelarea Sistemelor Software (AMSS)
- ▶ Instructor: Traian-Florin Șerbănuță
- ▶ Semester: Fall 2025
- ▶ Contact: [traian.serbanuta@unibuc.ro](mailto:traian.serbanuta@unibuc.ro)

# Agenda

1. Introductions
2. Course overview
3. Why analysis & modeling?
4. Interactive exercise
5. Mini modeling challenge
6. Logistics & next steps

# Who We Are

- ▶ Name
- ▶ Program
- ▶ One fun fact about you
- ▶ Your experience with software / modeling

# Course Scope & Objectives

By the end of the course, students should get better at:

- ▶ Analyzing requirements of software systems
- ▶ Creating structural and behavioral UML models
- ▶ Applying (some) design patterns effectively
- ▶ Evaluating models for consistency and completeness

# Course Structure

- ▶ **Structural diagrams:** class, package, component, deployment
- ▶ **Behavioral diagrams:** use case, state, activity, interaction
- ▶ **Model evaluation & testing**
- ▶ **Documentation & design patterns**
- ▶ **Project**

# Assessments

- ▶ Project: 90%
  - ▶ teams consisting of 4-5 students (recommended)
  - ▶ there will be a single note for the entire team
  - ▶ documentation (50%) and presentation (50%)
- ▶ Participation: 20%

# Why Analysis & Modeling?

- ▶ Software projects fail due to poor communication and unclear requirements
- ▶ Models help us:
  - ▶ Visualize systems
  - ▶ Detect errors early
  - ▶ Improve maintainability
  - ▶ Communicate across teams

# Icebreaker: Model Your Morning Routine

**Task:** Draw a simple diagram of how you got from waking up to arriving in class.

- ▶ 5 minutes individual work
- ▶ Share with a neighbor
- ▶ Volunteers present their models

# Mini Modeling Challenge

**Scenario:** A university library system.

- ▶ Users: students, faculty, external
- ▶ Operations: borrow, return, renew, reserve
- ▶ Constraints: borrowing limits

**Task:** Sketch a simple class diagram and at least one use case.

# Discussion

- ▶ Compare different group solutions
- ▶ What entities and relationships emerged?
- ▶ What use cases are most critical?
- ▶ What was challenging?

# Logistics & Next Steps

## AMSS 2025/2026

- ▶ Join Teams page:
- ▶ Course materials: <https://traiansf.github.io/class/amss2025/>
  - ▶ Materials from previous iteration of this class (prof. Claudia Chirita): GitHub
- ▶ Communication: Teams / email
- ▶ Next class: Requirements analysis

# Homework

## Readings

- ▶ Chapters 1 and 2 (and maybe 3) of Martin Fowler's UML Distilled
- ▶ Familiarize with some design patterns (and associated humour)

## Setup

Install/find some software for drawing UML diagrams you are comfortable with

Examples:

- ▶ PlantUML (also available as VSCode extension)
- ▶ Mermaid, 4 Github, a la Markdown. Sintaxă diagrame de clasă
- ▶ Lucidchart
- ▶ app.diagrams
- ▶ Visual Paradigm
- ▶ Microsoft Paint / Word / pencil and paper

# Thank You

- ▶ Today: introductions, overview, first modeling exercises
- ▶ Next: dive deeper into requirements analysis

**Questions?**
