

AMSS 2026 — Lecture 13: Project Workshop / Open Q&A

Traian-Florin Șerbănuță

2026

Today: Workshop + Open Q&A

This week is a **buffer**: no new content. In-class supervised work and open questions, with one week to go before the graded defense.

- ▶ Close the gaps from your **Lab 6 dry run**.
- ▶ Finalise your documentation and repo.
- ▶ Ask anything — this is the last session before **W14**.

What This Week Is — and Isn't

- ▶ **Is:** time to fix, finalise, and rehearse, with the instructor on hand.
- ▶ **Isn't:** a lecture, or a place to start your slice from scratch.

If you're starting now, prioritise a **small, owned** slice over a large unfinished one.

Work On: Your Lab 6 Gaps

You left the dry run with a written **gap list**. Close it:

- ▶ the F you were weakest on (F1 read, F3 rationale, or F4 trace);
- ▶ the specific defect, link, or rationale the instructor flagged.

That list is your highest-priority work today.

Work On: Documentation + Repo

The artifact points come from the repo. Finalise:

- ▶ the **directed-design narrative** (failed prompts, rejected outputs, decisions);
- ▶ the **defect log** (at least 5 substantive defects);
- ▶ the **two diagrams**, AI-generated and reviewed;
- ▶ the team **overview model** and requirements traceability.

Work On: Re-run Your Trace Audit

The W10 audit, one more time, on your own slice:

1. Every **requirement** reaches a **test**?
2. Every **artifact** traces back to a **requirement**?
3. Do the **layers agree**?
4. Any **stale links** since the dry run?

Fix broken links before someone finds them in W14.

Rehearse — Out Loud, With Peers

Defending is a **spoken** skill:

- ▶ Have a teammate ask you F1 / F3 / F4 cold.
- ▶ Read a diagram **aloud**; say **why** for each decision; **walk** a trace.
- ▶ Swap and critique each other.

Pre-W14 Readiness Checklist

Before you leave, can you honestly say:

- ▶ I can **read and critique** every diagram in my slice cold.
- ▶ I can **say why** for every direction I gave AI.
- ▶ I can **walk a trace** from a requirement to a test.
- ▶ My **defect log** is real and written down.

Be Honest About Thin Spots

A weak area you can **name** is far better than one you hope nobody asks about.

- ▶ Know where your slice is thin, and have a one-line reason.
- ▶ Honesty is a strength signal in the defense (W12).

Next Week: W14 — The Defense

W14 + Lab 7: team presentations and your **per-student cold defense** — graded, unaided.

You've rehearsed twice (Lab 5 checkpoint, Lab 6 dry run). This week closes the gaps. Then you defend the work that's yours.
