

AMSS 2026 — Lab 7: Final Presentations

Traian-Florin Șerbănuță

2026

Lab 7: Final Presentations

100 minutes — **the graded finale**. Held together with the Week 14 lecture slot.

- ▶ **Team presentations**, back to back — each team presents its overview + each student their slice.
- ▶ **Per-student cold defense** — the Critique / Rationale / Traceability oral defense, graded.
- ▶ **Reflection** — what AI got right and wrong this semester.

This is where the **bulk of the project grade** is decided.

The Format

Before we start: turn to your team and name the one defect you most want the examiner to see.

For each team, in turn:

1. **Team overview** (~5 min) — the system-level model; how the slices fit.
2. **Per-student slice** (~5 min each) — your requirement, your direction, what you caught, your trace.
3. **Cold defense** — the examiner asks Critique / Rationale / Traceability questions about your slice (and any diagram).

What's Graded (the Project Rubric)

Your project grade was defined in the project description — the defense is the largest live piece:

- ▶ **Oral defense (3 pts)** — Critique, Rationale, Traceability demonstrated cold. *The integrity check.*
- ▶ **Narrative + defect log (2 pts), documentation (1 pt), patterns (1 pt)** — from your repo.
- ▶ **Checkpoint (1 pt)** — already taken in Lab 5.

Present the Trail (Week 12)

Lead with what you **did**, not just the final diagram:

- ▶ the requirement you own;
- ▶ how you **directed** AI, and what you **rejected**;
- ▶ a **defect you caught** and fixed;
- ▶ your **trace**, requirement to test.

The polished diagram is the result; the trail is the grade.

The Cold Defense

Unaided, no AI. The examiner may:

- ▶ show you **any** diagram (Critique) — read it, critique it;
- ▶ ask **why** you directed AI a certain way (Rationale);
- ▶ ask you to **walk a trace** (Traceability).

You rehearsed this in the Lab 5 checkpoint and the Lab 6 dry run.
Same skill, now graded.

The Reflection Segment

Each team closes with a short reflection:

- ▶ Where did AI **help** most across the semester?
- ▶ Where did it **fail** — and how did your critique catch it?
- ▶ What would you direct differently next time?

Logistics

- ▶ Bring nothing but your repo — no AI, no new slides needed beyond your slice presentation.
- ▶ Teams present back to back; **be on time** — the schedule is tight.
- ▶ Every student must be present for their own defense.

Why This Matters

This is the moment the whole course was built for: you present an **AI-mediated design** and defend it as its **architect and critic** — cold, unaided, in your own words.

That's the skill AI can't do for you, and the one that matters.
